SS-HPC500

Handheld Pressure Calibrator Model HPC500 Family

JOFRA HPC500 calibrators feature deadweight tester accuracy in a modern digital package. The HPC is available as an independent calibrator or in one of 6 ready-for-test systems that are complete and equipped to meet any need for pressure calibration.

The HPC500 may be used in a very broad range of applications from simple tool type jobs to complex calibration jobs in custody transfer systems.

The JOFRA HPC500 calibrators introduce a new generation of AMETEK handheld pressure calibrators. This series has been designed to meet high accuracy pressure calibration applications and facilitate your tasks. The HPC offers features such as user configurable information display, 15 different pressure units, transmitter supply, mA input, % error calculation, voltage measurement, serial communication, and external pressure module capability. The accuracy of the HPC500 calibrators is specified in % of reading to ensure an even better accuracy and wider applicable pressure range. The HPC is temperature compensated from 0 to 50°C / 32 to 122°F for on-site operation. It is a truly superior pressure calibrator for laboratory and field use, bringing laboratory accuracy into the field.

The JOFRA APM series of pressure modules extends the application base of the HPC calibrators by allowing calibrations in additional ranges. The APM modules are compatible with several other JOFRA calibrators.

Calibration of the instrument may be performed locally without returning the HPC unit to the manufacturer. Adjustment software is part of the design - you just need an accurate pressure reference and a PC. If factory calibration is required, the pump and the calibrator are independent units and only the calibrator needs to be returned.

JOFRACAL CALIBRATION SOFTWARE

Compatible with 2010 software release

JOFRACAL calibration software ensures easy calibration of RTD's, thermocouples, transmitters, thermowithes, pressure gauges and pressure switches. JOFRACAL can be used with JOFRA DPC-500, HPC500, HPC502 and IPI pressure calibrators, all JOFRA temperature calibrators, as well as JOFRA AMC910, ASC300 multi signal calibrator and ASM-800 signal multi scanner. When used with JOFRA ASM-800 signal multi scanner, JOFRACAL can perform a simultaneous semiautomatic calibration of up to 24 pressure and/or temperature devices under test in any combination.

JOFRACAL software controls the complete calibration procedure, stores the results and provides a calibration audit trail through hard-copy certificates. All calibration data are stored for each sensor to monitor drift and optimize recalibration intervals. A scheduler feature allows planning of future calibrations.

The JOFRACAL temperature calibration software may be downloaded free of charge from our website.

JOFRA APM pressure module

The JOFRA APM external pressure modules extend the range of the JOFRA HPC. There are more than 60 models available with gauge, absolute, differential, and vacuum pressure references, in metric and imperial engineering units.

The modules are engineered for in-plant, field, or laboratory use. They are ready-to-use with the JOFRA HPC and the protocol allows for immediate recognition and use of the module once it is plugged into the calibrator.

HPC500, System A

- AXX/0 to 2 bar (0 to 30 psi)
- AHX/0 to 40 bar (0 to 580 psi)

This system includes the HPC calibrator together with one pneumatic hand pump: T-960 and T-970, depending on the chosen pressure range. System A is an easy-to-use single hand operated calibration system. No need for a flat surface to operate the system - just hold it in your hand.

The system comes in a carrying case with cut-outs for fittings, hose, and the complete assembled calibration unit - no time is required to assemble the unit. The calibrator can at any time be used separately for other pressure test jobs.

A special quick connector between the pump and the calibrator makes it possible to separate the system in seconds and swivel the calibrator for easy viewing.

The HPC calibrators used in System A are delivered calibrated in both pressure and vacuum.
